# EXPERIMENT 2

## Sketch a Simple Prototype of a Bus Ticket Booking System using Figma Tool

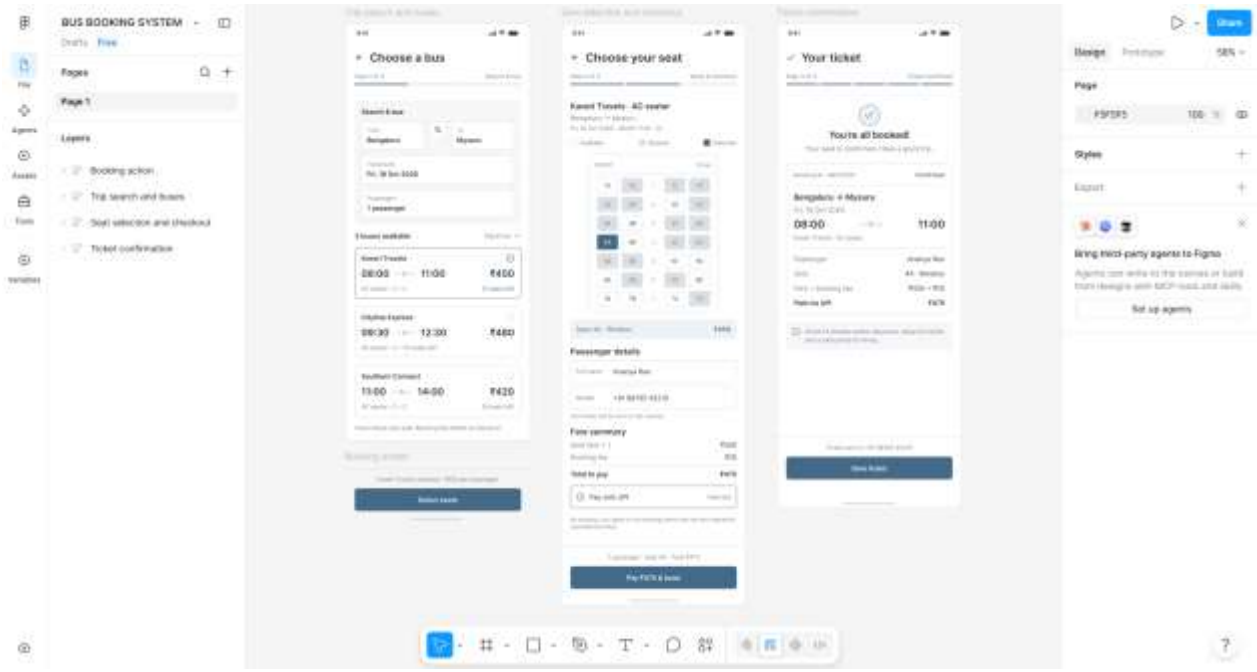

### 1. AIM

To design a simple prototype of a Bus Ticket Booking System using Figma. The prototype helps users search for buses, select seats, enter passenger details, and view booking confirmation through a user-friendly interface.

### 2. PROCEDURE

1. Open the Figma website (www.figma.com) and log in to your account.
2. Create a new design file by clicking on New Design File.
3. Select a suitable frame size for a mobile application.
4. Design a Home Page with the application name, From, To, Journey Date, and Search Buses button.
5. Design a Bus Selection Page to display available buses, timings, prices, and bus details.
6. Create a Seat Selection Page to allow users to select available seats.
7. Design a Passenger Details Page with name, age, and contact number fields.
8. Create a Payment and Booking Confirmation Page to display booking details and ticket status.
9. Use buttons, shapes, icons, and text to make the design attractive.
10. Connect the screens using Figma's Prototype option to simulate the booking process.

## OUTPUT

## RESULT

Thus, a simple Bus Ticket Booking System prototype was successfully designed using Figma. The prototype includes Home Page, Bus Selection, Seat Selection, Passenger Details, Payment, and Booking Confirmation screens. The screen interactions were connected to demonstrate the complete bus ticket booking workflow.
