# EXPERIMENT 4

## Create a Scrum Project in Jira.

## □ Add a backlog with at least 5 items (e.g., "Create user registration page", "Develop API for login").

## □ Prioritize the backlog and create a 1-week sprint.

## □ Move backlog items into the sprint and start the sprint.

## □ Finally show the Screenshot of the sprint board at the start and end of the sprint.

### 1. AIM

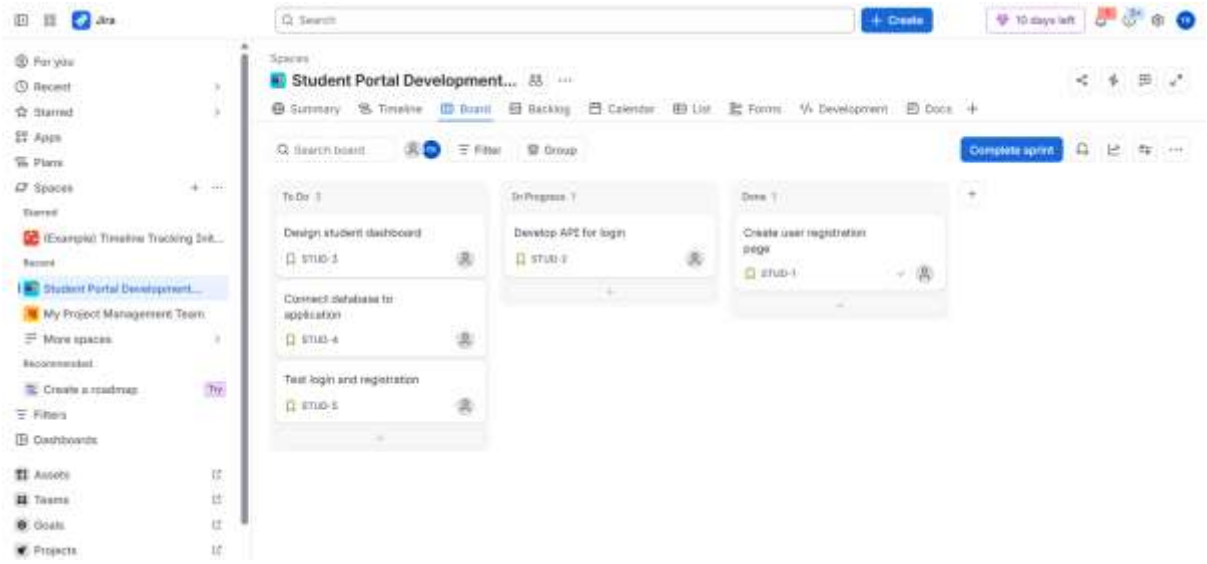

To create a Scrum project in Jira, add and prioritize at least five backlog items, plan a one-week sprint, move the selected tasks into the sprint, and start the sprint to manage and track project progress.

### 2. PROCEDURE

1. Open the Jira website (www.atlassian.com/software/jira) and log in to your account.
2. Click on Create Project and select the Scrum project template.
3. Enter the project name and create the Scrum project.
4. Open the Backlog section and add at least five sample user stories or tasks.
5. Add the following backlog items:
    - Create User Registration Page.
    - Develop API for Login.
    - Design Home Page.
    - Create Database for Users.
    - Test Login Functionality.
6. Prioritize the backlog items based on their importance and requirements.
7. Click on Create Sprint and set the sprint duration to one week.
8. Move the selected backlog items into the newly created sprint.
9. Click on Start Sprint, provide the sprint name, start date, and end date.
10. Open the Active Sprint board to view and track the tasks.
11. Move tasks across the columns (To Do, In Progress, and Done) as the work progresses.

12. Take a screenshot of the sprint board at the beginning and at the end of the sprint for documentation.

**OUTPUT**

**RESULT**

Thus, a Scrum project was successfully created in Jira. At least five backlog items were added and prioritized. A one-week sprint was created, and the selected tasks were moved into the sprint. The sprint was started successfully, and the tasks were tracked using the sprint board. Screenshots were captured at the beginning and end to demonstrate the project progress.
